Jaipur Development Authority  
Jaipur.

Sub.- suggestions

Sir,

I need to submit few suggestions to you for B-2 bypass road ( SFS mansarovar to Mansarovar metro station)

1. Please do not raise the level of main road because in absence of roadside nalla the entire water of this road enters in residential areas of mansarovar, for example water of aravali marg ( south gate of city park) and B-2 bypass joint area, flows in sector 81 due to raising of B-2 bypass road.
2. There is an urgent need to build a round circle chouraha at V.T. road- patrakar colony crossing
3. Since the encroachment on B-2 bypass has been demolished and BRTS is now being de-rooted there is enough space to plant dense and shade trees near service road ( mansarovar side is already green but other side needs trees).
4. I have visited 11 countries and everywhere there is an effective tradition to remove rain water by making drain or nalla on main road instead of making nalla or naali along -near residences of shops and these drains are covered with thick iron lid with holes of 2- 4 inches. Cannot we adopt this method ?

regards
